EDUCATION

Manipal Institute of Technology

B.Tech, Data Science & Engineering | CGPA: 7.95/10

– Coursework: Machine Learning, Database Systems, Statistics, Java OOP, Python, C

Manipal, India

Aug 2024 – May 2028

EXPERIENCE

Ernst & Young (EY)

AI Intern — Tax Technology & Reconciliation

- Shipped 4 production-grade systems in 2 months at a Big Four firm, spanning NLP data pipelines, LLM-driven financial assistants, real-time analytics dashboards, and web automation.
- Engineered a semantic GST Schema Standardization pipeline; fine-tuned **all-MiniLM-L6-v2** via hard-negative mining (MNRL), boosting Macro F1 by 9.4% on noisy data and reducing latency by 15x via batch encoding.
- Developed an end-to-end conversational stock analysis assistant using Groq LLM APIs and **yfinance**, integrated with a full-stack financial reporting dashboard (FastAPI backend, Vite/TypeScript SPA).
- Automated high-volume B2B invoice retrieval for major airlines (Qatar Airways, Vistara) using Selenium, streamlining data ingestion and eliminating manual handoffs for internal tax compliance teams.

Gurugram, India

Jul 2025 – Aug 2025

Graceland Asset Management

Data Analyst Intern

- Cleaned and structured multi-source real estate datasets using Pandas; performed exploratory analysis to support internal benchmarking and property-level comparison.
- Produced summary reports adopted by the team for operational evaluation.

Hybrid

Jun 2024 – Aug 2024

PROJECT

Semantic GST Schema Standardization Engine

 Github

- Designed an end-to-end NLP pipeline using all-MiniLM-L6-v2 to automatically map unstructured, noisy financial spreadsheet headers to a strict 61-field GST compliance schema, eliminating rule-based fragility.
- Fine-tuned the model using MultipleNegativesRankingLoss (MNRL) and evaluated on 287 real-world variants; achieved +8.7% Top-1 accuracy, a 9.4% Macro F1 boost, and implemented batch encoding for a 15x latency reduction (0.27ms/column).
- Architected a production-ready Python package featuring automated collision resolution for conflicting mappings, confidence thresholding, and structured JSONL audit logging to ensure full traceability for enterprise tax analysts.

LEADERSHIP & AWARDS

NASA Space Settlement Design Competition

Head of Human Factors Engineering

- Directed a 50+ member international team across engineering, life sciences, and design to deliver a full orbital habitat proposal via to NASA and Boeing engineers at Kennedy Space Center.
- Awarded **Dick Edwards Exceptional Leadership Award** (Top 0.5% global cohort); National Winner; Asian Regional and International Runner-Up.

(Hybrid) Titusville, FL

2022 – 2023

Other: Global Talent Search Examination — All India Rank 1 (English)

TECHNICAL SKILLS

Languages: Python, SQL, Java, C

Libraries & Frameworks: Pandas, NumPy, Hugging Face Transformers, scikit-learn, Matplotlib, Seaborn, Selenium, FastAPI

Tools: Git, Jupyter, REST APIs, Excel

Domains: NLP, Machine Learning, Data Analytics, Workflow Automation, Financial Data Systems

CERTIFICATIONS

Python for Data Science, AI & Development — **IBM**

Cambridge English First — **CEFR C1, Grade A**
